

A reversal of rotation with braking prior to a ramp-up in the other direction of rotation will only take place if, during the reversal, K1 and K2 have dropped out for more than 250ms. With a reversing time shorter than this, the motor will, without braking, accelerate in the reverse direction.

This wiring proposal has been prepared with great care. Nevertheless, PETER electronic GmbH & Co. KG does not assume liability for damage resulting from mistakes possibly contained in it. We reserve the right to make changes due to technical improvements.
