Declaration of Conformity

PETER electronic GmbH & Co. KG hereby states that the VersiDrive i E3S product range conforms to the relevant safety provisions of the following council directives:

| 2004/108/EC (EMC) and 2006/95/EC (LVD) | (Valid until 20.04.2016) |
|--|--------------------------|
| 2014/30/EU (EMC) and 2014/35/EU (LVD) | (Valid from 20.04.2016) |

Designed and manufacture is in accordance with the following harmonised European standards:

| EN 61800-5-1: 2003 | Adjustable speed electrical power drive systems. Safety requirements. Electrical, thermal and energy. |
|-------------------------------------|--|
| EN 61800-3 2 nd Ed: 2004 | Adjustable speed electrical power drive systems. EMC requirements and specific test methods |
| EN 55011: 2007 | Limits and Methods of measurement of radio disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment (EMC) |
| EN60529 : 1992 | Specifications for degrees of protection provided by enclosures |

Electromagnetic Compatibility

All VersiDrive i's are designed with high standards of EMC in mind. All versions suitable for operation on Single Phase 230 volt and Three Phase 400 volt supplies and intended for use within the European Union are fitted with an internal EMC filter. This EMC filter is designed to reduce the conducted emissions back into the supply via the power cables for compliance with the above harmonised European standards. It is the responsibility of the installer to ensure that the equipment or system into which the product is incorporated complies with the EMC legislation of the country of use. Within the European Union, equipment into which this product is incorporated must comply with the EMC Directive 2004/108/EC. When using an VersiDrive i with an internal or optional external filter, compliance with the following EMC Categories, as defined by EN61800-3:2004 can be achieved:

| Drive Type / Rating | | EMC Category | | | | | | | | |
|--|---|----------------------------------|--------|--------|--|--|--|--|--|--|
| | | Cat C1 | Cat C2 | Cat C3 | | | | | | |
| 1 Phase, 230 Volt Input | | No additional filtering required | | | | | | | | |
| | | Use shielded motor cable | | | | | | | | |
| Note | ment in which the drive is installed, | | | | | | | | | |
| note | motor switching frequency, motor, cable lengths and installation methods adopted. | | | | | | | | | |
| Compliance with EMC directives is achieved with the factory default parameter settings | | | | | | | | | | |
| | | | | | | | | | | |

All PETER electronic VersiDrive i E3S units carry a 2 year warranty against manufacturing defects from the date of manufacture. The manufacturer accepts no liability for any damage caused during or resulting from transport, receipt of delivery, installation or commissioning. The manufacturer also accepts no liability for damage or consequences resulting from inappropriate, negligent or incorrect installation, incorrect adjustment of the operating parameters of the drive, incorrect matching of the drive to the motor, incorrect installation, unacceptable dust, moisture, corrosive substances, excessive vibration or ambient temperatures outside of the design specification.

The local distributor may offer different terms and conditions at their discretion, and in all cases concerning warranty, the local distributor should be contacted first.

2. General Information and Ratings

This chapter contains information about the VersiDrive i E3S including how to identify the drive

2.1. Identifying the Drive by Model Number

Each drive can be identified by its model number, as shown in the table below. The model number is on the shipping label and the drive nameplate. The model number includes the drive and any options.

- No. of input Phases: No Text = Single Phase 3 = Three Phase

2.2. Drive Model Numbers

| 110 - 115 + / - 10% einphasiger Eingang, 110 V einphasiger Ausgang (Spannungsverdoppler) | | | | | | | | |
|--|---|------|------------------------|------------------------|---------------|--|--|--|
| Model | kW | HP | Ausgangs- Strom (A) | Bau- größe | | | | |
| VDI-037- | E3S-#-115V | | 0.5 | 7.0 | 1 | | | |
| VDI-055- | E3S-#-115V | | 0.75 | 10.5 | 2 | | | |
| 200 - 240 V + / - 10% einp | 200 - 240 V + / - 10% einphasiger Eingang - einphasiger Ausgang | | | | | | | |
| Model | nummer | kW | HP | Ausgangs- Strom (A) | Bau- größe | | | |
| VDI-03 | 37-E3S-# | 0.37 | 0.5 | 4.3 | 1 | | | |
| VDI-07 | 75-E3S-# | 0.75 | 1 | 7.0 | 1 | | | |
| VDI-11 | VDI-110-E3S-# | | | 10.5 | 2 | | | |
| HINWEIS | Bei IP20-Einheiten ersetzen Sie `#´ durch IP20 Bei nicht geschalteten IP66-Einheiten ersetzen Sie `#´ durch IP66 Bei geschalteten IP66-Einheiten ersetzen Sie `#´ durch IP66S | | | | | | | |

3. Mechanical Installation

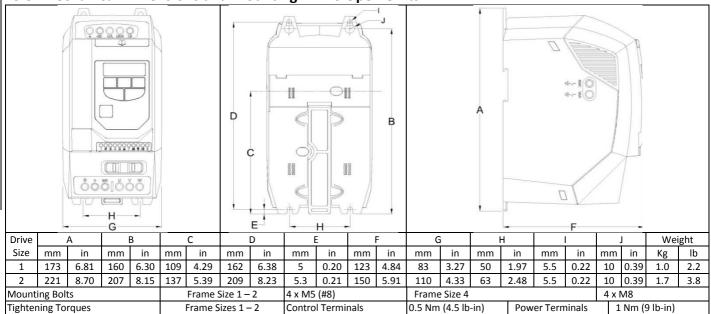

3.1. General

- The VersiDrive i E3S should be mounted in a vertical position only, on a flat, flame resistant, vibration free mounting using the integral mounting holes or DIN Rail clip.
- IP20 VersiDrive i E3S's must be installed in a pollution degree 1 or 2 environment only.
- Do not mount flammable material close to the VersiDrive i E3S
- Ensure that the minimum cooling air gaps, as detailed in section 3.5 and 3.7 are left clear
- Ensure that the ambient temperature range does not exceed the permissible limits for the VersiDrive i E3S given in section 9.1
- Provide suitable clean, moisture and contaminant free cooling air sufficient to fulfil the cooling requirements of the VersiDrive i E3S

3.2. UL Compliant Installation

Refer to section 9.3 on page 27 for Additional Information for UL Compliance.

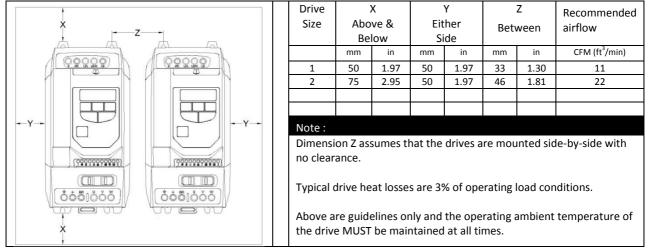

3.3. Mechanical Dimensions and Mounting – IP20 Open Units

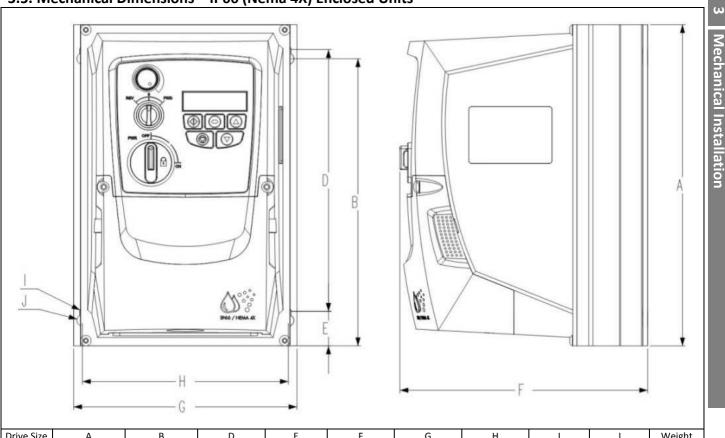

3.4. Guidelines for Enclosure Mounting - IP20 Units

- IP20 drives are suitable for use in pollution degree 1 environments, according to IEC-664-1. For pollution degree 2 or higher environments, drives should be mounted in a suitable control cabinet with sufficient ingress protection to maintain a pollution degree 1 environment around the drive.
- Enclosures should be made from a thermally conductive material.
- Ensure the minimum air gap clearances around the drive as shown below are observed when mounting the drive.
- Where ventilated enclosures are used, there should be venting above the drive and below the drive to ensure good air circulation. Air should be drawn in below the drive and expelled above the drive.
- In any environments where the conditions require it, the enclosure must be designed to protect the VersiDrive i E3S against ingress of airborne dust, corrosive gases or liquids, conductive contaminants (such as condensation, carbon dust, and metallic particles) and sprays or splashing water from all directions.
- High moisture, salt or chemical content environments should use a suitably sealed (non-vented) enclosure.

The enclosure design and layout should ensure that the adequate ventilation paths and clearances are left to allow air to circulate through the drive heatsink. PETER electronic recommend the following minimum sizes for drives mounted in non-ventilated metallic enclosures:-

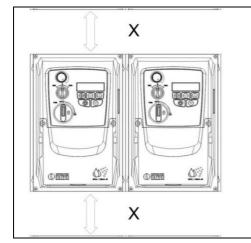

| Drive Size | A | | E | 3 | D | 1 | 6 | | F | | G | i | Н | | | I | | J | We | ight |
|--------------------|----------------|-----------------|----------|---------|-------|---------------------|------|------|--------------------|------|-------|------|-------|------|-----|------|-----|------|-----|------|
| | mm | in | mm | in | mm | in | mm | in | mm | In | mm | in | mm | in | mm | in | mm | in | kg | lb |
| 1 | 232.0 | 9.13 | 207.0 | 8.15 | 189.0 | 7.44 | 25.0 | 0.98 | 179.0 | 7.05 | 161.0 | 6.34 | 148.5 | 5.85 | 4.0 | 0.16 | 8.0 | 0.31 | 3.1 | 6.8 |
| 2 | 257.0 | 10.12 | 220.0 | 8.67 | 200.0 | 7.87 | 28.5 | 1.12 | 187.0 | 7.36 | 188.0 | 7.40 | 176.0 | 6.93 | 4.2 | 0.17 | 8.5 | 0.33 | 4.1 | 9.0 |
| Mounting B | Mounting Bolts | | All Fram | e Sizes | 4 x N | Л4 (#8) | | | | | | | | | | | | | | |
| Tightening Torques | | | | | Cont | Control Terminals (| | | 0.5 Nm (4.5 lb-in) | | | | | | | | | | | |
| | | All Frame Sizes | | | Pow | wer Terminals 1 | | | 1 Nm (9 lb-in) | | | | | | | | | | | |

3.6. Guidelines for mounting (IP66 Units)

- Before mounting the drive, ensure that the chosen location meets the environmental condition requirements for the drive shown in section 9.1
- The drive must be mounted vertically, on a suitable flat surface
- The minimum mounting clearances as shown in the table below must be observed
- The mounting site and chosen mountings should be sufficient to support the weight of the drives
- Using the drive as a template, or the dimensions shown above, mark the locations required for drilling
- Suitable cable glands to maintain the ingress protection of the drive are required. Gland holes for power and motor cables are premoulded into the drive enclosure, recommended gland sizes are shown above. Gland holes for control cables may be cut as required.

| Drive Size | X Above | e & Below | Y | Either Side | | | |
|---|--------------|-----------|----------|----------------|--|--|--|
| | mm | in | mm | in | | | |
| 1 | 200 | 7.87 | 10 | 0.39 | | | |
| 2 | 200 | 7.87 | 10 | 0.39 | | | |
| | | | | | | | |
| | | | Note: | | | | |
| Typical drive heat losses are approximately 3% of operating load conditions. Above are guidelines only and the operating ambient temperature of the drive MUST be maintained at all times. | | | | | | | |
| Cable Gland Sizes | | | | | | | |
| Drive Size | Power Cab | le Mot | or Cable | Control Cables | | | |
| 1 | M20 (PG13 | 8.5) M20 | (PG13.5) | M20 (PG13.5) | | | |
| 2 | 2 M25 (PG21) | | | M20 (PG13.5) | | | |

3.7. Gland Plate and Lock Off

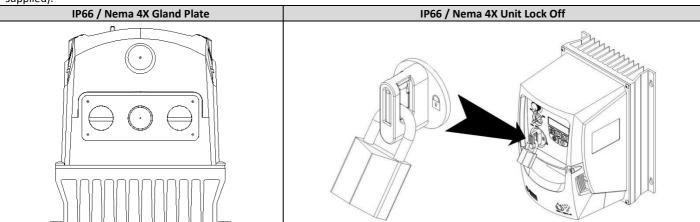

The use of a suitable gland system is required to maintain the appropriate IP / Nema rating. The gland plate has pre moulded cable entry holes for power and motor connections suitable for use with glands as shown in the following table. Where additional holes are required, these can be drilled to suitable size. Please take care when drilling to avoid leaving any particles within the product.

| Cable Gland recommended Hole Sizes & types: | | | | | | | | | |
|---|--------------|--------------------|-------------------------|------------------------|------------|----------------|--|--|--|
| | Pov | ver & Motor Cables | Control & Signal Cables | | | | | | |
| | Moulded Hole | Imperial Gland | Metric Gland | Knockout Size Imperial | | d Metric Gland | | | |
| | Size | | | | | | | | |
| Size 1 | 22mm | PG13.5 | M20 | 22mm | PG13.5 M20 | | | | |
| Size 2 | 27mm | PG21 | M25 | 22mm | PG13.5 | M20 | | | |
| Flexible Conduit Hole Sizes: | | | | | | | | | |
| | Drill S | size | Trade Siz | ze | Metric | | | | |
| Size 1 | 28m | m | ¾ in | | 21 | | | | |
| Size 2 & 3 | 35m | m | 1 in | | 27 | | | | |
| • Ill rated ingress protection ("Type") is only met when cables are installed using a III recognized bushing or fitting for a flexible- | | | | | | | | | |

- UL rated ingress protection ("Type") is only met when cables are installed using a UL recognized bushing or fitting for a flexibleconduit system which meets the required level of protection ("Type")
- For conduit installations the conduit entry holes require standard opening to the required sizes specified per the NEC
- Not intended for installation using rigid conduit system

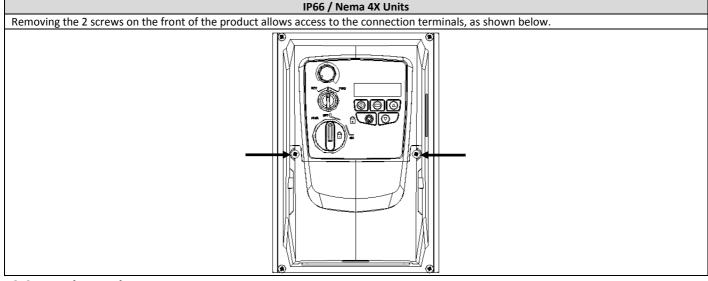

Power Isolator Lock Off

On the switched models the main power isolator switch can be locked in the 'Off' position using a 20mm standard shackle padlock (not supplied).

3.8. Removing the Terminal Cover

To access the connection terminals, the drive front cover needs to be removed as shown.

3.9. Routine Maintenance

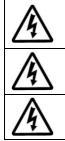

The drive should be included within the scheduled maintenance program so that the installation maintains a suitable operating environment, this should include:

- Ambient temperature is at or below that set out in the "Environment" section.
- Heat sink fans freely rotating and dust free.
- The Enclosure in which the drive is installed should be free from dust and condensation; furthermore ventilation fans and air filters should be checked for correct air flow.

Checks should also be made on all electrical connections, ensuring screw terminals are correctly torqued; and that power cables have no signs of heat damage.

4. Power Wiring

4.1. Grounding the Drive

This manual is intended as a guide for proper installation. PETER electronic GmbH & Co. KG cannot assume responsibility for the compliance or the non-compliance to any code, national, local or otherwise, for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

This VersiDrive i E3S contains high voltage capacitors that take time to discharge after removal of the main supply. Before working on the drive, ensure isolation of the main supply from line inputs. Wait ten (10) minutes for the capacitors to discharge to safe voltage levels. Failure to observe this precaution could result in severe bodily injury or loss of life.

Only qualified electrical personnel familiar with the construction and operation of this equipment and the hazards involved should install, adjust, operate, or service this equipment. Read and understand this manual and other applicable manuals in their entirety before proceeding. Failure to observe this precaution could result in severe bodily injury or loss of life.

Grounding Guidelines

The ground terminal of each VersiDrive i E3S should be individually connected DIRECTLY to the site ground bus bar (through the filter if installed). VersiDrive i E3S ground connections should not loop from one drive to another, or to, or from any other equipment. Ground loop impedance must confirm to local industrial safety regulations. To meet UL regulations, UL approved ring crimp terminals should be used for all ground wiring connections.

The drive Safety Ground must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be checked periodically. Protective Earth Conductor

The Cross sectional area of the PE Conductor must be at least equal to that of the incoming supply conductor.

Safety Ground

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod, or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

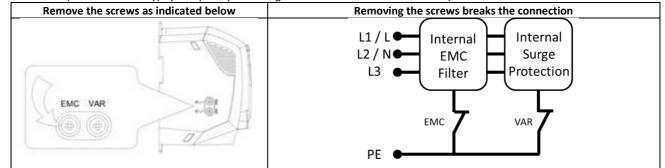

Ground Fault Monitoring

As with all inverters, a leakage current to earth can exist. The VersiDrive i E3S is designed to produce the minimum possible leakage current whilst complying with worldwide standards. The level of current is affected by motor cable length and type, the effective switching frequency, the earth connections used and the type of RFI filter installed. If an ELCB (Earth Leakage Circuit Breaker) is to be used, the following conditions apply: -

- A Type B Device must be used
- The device must be suitable for protecting equipment with a DC component in the leakage current
- Individual ELCBs should be used for each VersiDrive i E3S

4.2. EMC Filter Disconnect

Drives with an EMC filter have an inherently higher leakage current to Ground (Earth). For applications where tripping occurs the EMC filter can be disconnected (on IP20 units only) by completely removing the EMC screw on the side of the product.

The VersiDrive i E3S product range has input supply voltage surge suppression components fitted to protect the drive from line voltage transients, typically originating from lightning strikes or switching of high power equipment on the same supply.

When carrying out a HiPot (Flash) test on an installation in which the drive is built, the voltage surge suppression components may cause the test to fail. To accommodate this type of system HiPot test, the voltage surge suppression components can be disconnected by removing the VAR screw. After completing the HiPot test, the screw should be replaced and the HiPot test repeated. The test should then fail, indicating that the voltage surge suppression components are once again in circuit.

Shield Termination (Cable Screen)

The safety ground terminal provides a grounding point for the motor cable shield. The motor cable shield connected to this terminal (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal.

4.3. Wiring Precautions

Connect the VersiDrive i E3S according to section 4.8, ensuring that motor terminal box connections are correct.

4.4. Incoming Power Connection

- For 1 phase supply, power should be connected to L1/L, L2/N.
- For 3 phase supplies, power should be connected to L1, L2, and L3. Phase sequence is not important.
- For compliance with CE and C Tick EMC requirements, a symmetrical shielded cable is recommended.
- A fixed installation is required according to IEC61800-5-1 with a suitable disconnecting device installed between the VersiDrive i E3S and the AC Power Source. The disconnecting device must conform to the local safety code / regulations (e.g. within Europe, EN60204-1, Safety of machinery).
- The cables should be dimensioned according to any local codes or regulations. Guideline dimensions are given in section 9.2.
- Suitable fuses to provide wiring protection of the input power cable should be installed in the incoming supply line, according to the data in section 9.2 Rating Tables. The fuses must comply with any local codes or regulations in place. In general, type gG (IEC 60269) or UL type J fuses are suitable; however in some cases type aR fuses may be required. The operating time of the fuses must be below 0.5 seconds.
- Where allowed by local regulations, suitably dimensioned type B MCB circuit breakers of equivalent rating may be utilised in place of fuses, providing that the clearing capacity is sufficient for the installation.
- When the power supply is removed from the drive, a minimum of 30 seconds should be allowed before re-applying the power. A minimum of 5 minutes should be allowed before removing the terminal covers or connection.
- The maximum permissible short circuit current at the VersiDrive i E3S Power terminals as defined in IEC60439-1 is 100kA.
- An optional Input Choke is recommended to be installed in the supply line for drives where any of the following conditions occur:-
 - The incoming supply impedance is low or the fault level / short circuit current is high
 - The supply is prone to dips or brown outs
 - \circ \quad An imbalance exists on the supply (3 phase drives)
 - The power supply to the drive is via a busbar and brush gear system (typically overhead Cranes).
- In all other installations, an input choke is recommended to ensure protection of the drive against power supply faults. Part numbers are shown in the table.

| Frame Size | AC Input Inductor |
|------------|-------------------|
| 1 | OPT-2-L1016-20 |
| 2 | OPT-2-L1025-20 |

4.5. Drive and Motor Connection

- The drive inherently produces fast switching of the output voltage (PWM) to the motor compared to the mains supply, for motors which have been wound for operation with a variable speed drive then there is no preventative measures required, however if the quality of insulation is unknown then the motor manufacturer should be consulted and preventative measures may be required.
- The motor should be connected to the VersiDrive i E3S U, V, and W terminals using a suitable 3 or 4 core cable. Where a 3 core cable is utilised, with the shield operating as an earth conductor, the shield must have a cross sectional area at least equal to the phase conductors when they are made from the same material. Where a 4 core cable is utilised, the earth conductor must be of at least equal cross sectional area and manufactured from the same material as the phase conductors.
- The motor earth must be connected to one of the VersiDrive i E3S earth terminals.
- For compliance with the European EMC directive, a suitable screened (shielded) cable should be used. Braided or twisted type screened cable where the screen covers at least 85% of the cable surface area, designed with low impedance to HF signals are recommended as a minimum. Installation within a suitable steel or copper tube is generally also acceptable.
- The cable screen should be terminated at the motor end using an EMC type gland allowing connection to the motor body through the largest possible surface area
- Where drives are mounted in a steel control panel enclosure, the cable screen may be terminated directly to the control panel using a suitable EMC clamp or gland, as close to the drive as possible.
- For IP66 drives, connect the motor cable screen to the internal ground clamp

4.6. Motor Thermal overload Protection

4.6.1. Internal Thermal Overload Protection

The drive has an in-built motor thermal overload function; this is in the form of an "I.t-trP" trip after delivering >100% of the value set in P-08 for a sustained period of time (e.g. 150% for 60 seconds).

4.6.2. Motor Thermistor Connection

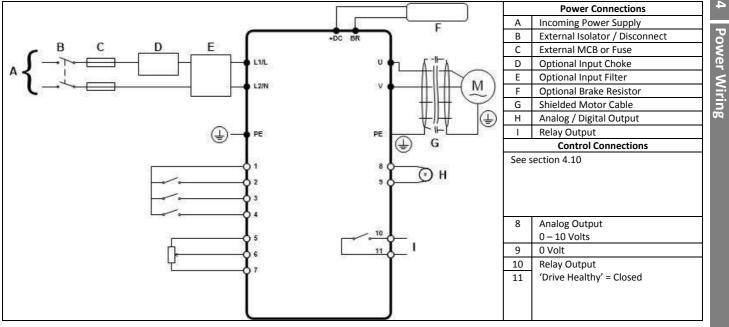

Where a motor thermistor is to be used, it should be connected as follows:-

| Control Terminal Strip | Additional Information |
|------------------------|---|
| 1 2 3 4 | Compatible Thermistor : PTC Type, 2.5kΩ trip level |
| L Å | Use a setting of P-15 that has Input 3 function as External Trip, e.g. P-15 = 3. Refer to section 7 for further details. Set P-47 = "Ptc-th" |

4.7. Control Terminal Wiring

- All analog signal cables should be suitably shielded. Twisted pair cables are recommended.
- Power and Control Signal cables should be routed separately where possible, and must not be routed parallel to each other.
- Signal levels of different voltages e.g. 24 Volt DC and 110 Volt AC, should not be routed in the same cable.
- Maximum control terminal tightening torque is 0.5Nm.
- Control Cable entry conductor size: 0.05 2.5mm² / 30 12 AWG.

4.8. Connection Diagram

4.9. Using the REV/0/FWD Selector Switch (Switched Version Only)

By adjusting the parameter settings the VersiDrive i E3S can be configured for multiple applications. This could typically be for Hand/Off/Auto applications (also known and Local/Remote) for HVAC and pumping industries.

Note : Forward / Reverse operation of single phase motors is not possible

4

| REV FWD | REV FWD | REV FWD |
|---------|---------|---------|

| | | DC bus voltage log (V) | Run-time clock stopped on drive disable, value reset on next enable 8 most recent values prior to trip, 256ms sample time | | | | | |
| | P00-15 | Heatsink temperature log (°C) | 8 most recent values prior to trip, 30s sample time | | | | | |
| | P00-10 | Motor current log (A) | 8 most recent values prior to trip, 256ms sample time | | | | | |
| | P00-17 | DC bus ripple log (V) | 8 most recent values prior to trip, 22ms sample time | | | | | |
| | P00-19 | Internal drive temperature log (°C) | 8 most recent values prior to trip, 30 s sample time | | | | | |
| | P00-20 | Internal drive temperature (°C) | Actual internal ambient temperature in °C | | | | | |
| | P00-21 | CANopen process data input | Incoming process data (RX PDO1) for CANopen: PI1, PI2, PI3, PI4 | | | | | |
| | P00-22 | CANopen process data output | outgoing process data (TX PDO1) for CANopen: PO1, PO2, PO3, PO4 | | | | | |
| | | Accumulated time with heatsink > 85°C | | | | | | |
| | P00-23 | (Hours) | Total accumulated hours and minutes of operation above heatsink temp of 85°C | | | | | |
| | P00-24 | Accumulated time with drive internal temp > | Total accumulated hours and minutes of operation with drive internal ambient above | | | | | |
| | | 80°C (Hours) | 80C | | | | | |
| | P00-25 | Estimated rotor speed (Hz) | In vector control modes, estimated rotor speed in Hz | | | | | |
| | P00-26 | kWh meter / MWh meter | Total number of kWh / MWh consumed by the drive. | | | | | |
| | | | | | | | | |
| | P00-27 | Total run time of drive fans (Hours) | Time displayed in hh:mm:ss. First value displays time in hrs, press up to display | | | | | |
| | DOO 29 | Software version and checksum | mm:ss. Version number and checksum. "1" on LH side indicates I/O processor, "2" indicates | | | | | |
| | P00-26 | | power stage | | | | | |
| | P00-29 | Drive type identifier | Drive rating, drive type and software version codes | | | | | |
| | P00-30 | Drive serial number | Unique drive serial number | | | | | |
| | P00-31 | Motor current ld / lq | Displays the magnetising current (Id) and torque current (Iq). Press UP to show Iq | | | | | |
| | P00-32 | Actual PWM switching frequency (kHz) | Actual switching frequency used by drive | | | | | |
| | P00-33 | Critical fault counter – O-I | These parameters log the number of times specific faults or errors occur, and are | | | | | |
| | P00-34 | Critical fault counter – O-Volts | useful for diagnostic purposes. | | | | | |
| | P00-35 | Critical fault counter – U-Volts | | | | | | |
| | P00-36 | Critical fault counter – O-temp (h/sink) | | | | | | |
| | P00-30 | Critical fault counter – b O-I (chopper) | | | | | | |
| | | | | | | | | |
| | P00-38 | Critical fault counter – O-hEAt (control) | | | | | | |
| | P00-39 | Modbus comms error counter | | | | | | |
| | P00-40 | CANbus comms error counter | | | | | | |
| | P00-41 | I/O processor comms errors | | | | | | |
| | P00-42 | Power stage uC comms errors | | | | | | |
| | P00-43 P00-44 | Drive power up time (life time) (Hours) | Total lifetime of drive with power applied | | | | | |
| | P00-44 P00-45 | Phase U current offset & ref Phase V current offset & ref | Internal value | | | | | |
| | P00-45 | Phase W current offset & ref | Internal value | | | | | |
| | P00-46 P00-47 | Index 1 : Fire mode total active time | Total activation time of Fire Mode | | | | | |
| | 100-47 | Index 1 : Fire Mode Activation Count | Displays the number of times Fire Mode has been activated | | | | | |
| | P00-48 | Scope channel 1 & 2 | Displays signals for first scope channels 1 & 2 | | | | | |
| | | Scope channel 3 & 4 | Displays signals for first scope channels 3 & 4 | | | | | |
| | | Bootloader and motor control | Internal value | | | | | |
| | | | | | | | | |

6.4. Single Phase Motor - Boost Starting cycle

In order to provide a reliable method for starting the motor, a special technique is used. The motor is started immediately at rated frequency, whilst the voltage is ramped from an initial Boost Voltage (set in P-11) to the Motor Rated Voltage (set in P-07) over a Boost Period Duration (set in P-33). Following the starting boost period, the drive then begins to control the output frequency and speed of the motor. The graphs below show how this operation works.

In order to achieve reliable starting and optimise the starting method, the following procedure can be used.

- 1. The motor must be correctly connected to the drive and safe to operate before using this procedure.
- 2. Ensure the motor rated voltage (P-07) and current (P-08) have been correctly programmed in the drive parameters.
- 3. Select Extended Parameter Access by setting P-14 = 101.
- 4. Set the Boost Period Duration P-33 to the maximum allowed value of 150 seconds.
- 5. Start the drive, and display the motor current (press the Navigate button until the display shows "A x.x" where x is the motor current)
- 6. Check the current value compared to the motor rated current around 3 5 seconds after starting the drive
 - a. If the current displayed is less than 80% of the motor rated current
 - i. Stop the drive
 - ii. Increase P-11
 - iii. Repeat from step 5
 - If the current displayed is greater than 90% of the motor rated current
 - i. Stop the drive

b.

- ii. Reduce P-11
- iii. Repeat from step 5
- 7. The correct boost voltage setting should deliver 80 90% of the motor rated current approximately 3 5 seconds after enabling the drive.
- 8. Now the Boost Period Duration may be reduced to match the actual time required for the motor to start. The simplest method is to initially reduce in large steps and monitor the motor behaviour on starting the drive. The ideal boost period will be a few seconds longer than is required to bring the motor to full speed.

By following this procedure, the motor starting parameter can be optimised to start the motor reliably without excessive starting current.

7. Analog and Digital Input Macro Configurations

7.1. Overview

VersiDrive i E3S uses a Macro approach to simplify the configuration of the Analog and Digital Inputs. There are two key parameters which determine the input functions and drive behaviour:-

- P-12 Selects the main drive control source and determines how the output frequency of the drive is primarily controlled.
- **P-15** Assigns the Macro function to the analog and digital inputs.

Additional parameters can then be used to further adapt the settings, e.g.

- P-16 Used to select the format of the analog signal to be connected to analog input 1, e.g. 0 10 Volt, 4 20mA
- P-20 P-23 Preset speed parameters, which may be selected by the digital inputs
- P-30 Determines whether the drive should automatically start following a power on if the Enable Input is present
- P-31 When Keypad Mode is selected, determines at what output frequency / speed the drive should start following the enable
- command, and also whether the keypad start key must be pressed or if the Enable input alone should start the drive.
- P-47 Used to select the format of the analog signal to be connected to analog input 2, e.g. 0 10 Volt, 4 20mA

The diagrams below provide an overview of the functions of each terminal macro function, and a simplified connection diagram for each.

7.2. Macro Functions Guide Key

| 0 | | |
|---|----------------------|--|
| | STOP / RUN | Latched input, Close to Run, Open to Stop |
| | START Ĵ | Normally Open, Rising Edge Start Function |
| | AI1 REF | Analog Input 1 is the selected speed reference |
| D | P-xx REF | Speed setpoint from the selected preset speed |
| | PR-REF | Preset speeds P-20 – P-23 are used for the speed reference, selected according to other digital input status |
| | ^-FAST STOP (P-24)-^ | When both inputs are active simultaneously, the drive stops using Fast Stop Ramp Time P-24 |
| | E-TRIP ↓ | External Trip input, which must be Normally Closed. When the input opens, the drive trips showing |
| | | E-Er P or PEc-Eh depending on P-47 setting |
| | (NO) | Normally Open Contact, Momentarily Close to Start |
| | (NC) | Normally Closed Contact, momentary Open to Stop |
| | Fire Mode | Activates Fire Mode, see section 7.7 |
| | ENABLE | Hardware Enable Input. In Keypad Mode, P-31 determines whether the drive immediately starts, or the |
| | | keypad start key must be pressed. In other modes, this input must be present before the start signal via |
| | | the fieldbus interface |
| | INC SPD 1 | Normally Open, Close the input to Increase the motor speed |
| | DEC SPD Ĵ | Normally Open, Close input to Decrease motor speed |
| | KPD REF | Keypad Speed Reference selected |
| | FB REF | Selected speed reference from Fieldbus (Modbus RTU / CAN Open / Master depending on P-12 setting) |
| | | |

7.3. Macro Functions – Terminal Mode (P-12 = 0)

NOTE 2, 4, 8, 9, 10, 11, 12, 13 = 0

When P-12 = 3 or 4, and P-15 = 5, 6, or 7, when DI 2 is on, DI1 will start and stop the drive.

When P-12 = 3 or 4 and P-31 = 2, 3, 6 or 7, The drive will start / stop based on DI1 only and communication loss is disabled

7.6. Macro Functions - User PI Control Mode (P-12 = 5 or 6)

| P-15 | | DI1 | | 012 | | DI3 / AI2 | | / Al1 | Diagram | |

| NOTE | OTE 2, 8, 9, 10, 11, 12, 13 = 0 | | | | | | | | | |

7.7. Fire Mode

The Fire Mode function is designed to ensure continuous operation of the drive in emergency conditions until the drive is no longer capable of sustaining operation. The Fire Mode input may be a normally open (Close to Activate Fire Mode) or Normally Closed (Open to Activate Fire Mode) according to the setting of P-30 Index 2. In addition, the input may be momentary or maintained type, selected by P-30 Index 3.

This input may be linked to a fire control system to allow maintained operation in emergency conditions, e.g. to clear smoke or maintain air quality within that building.

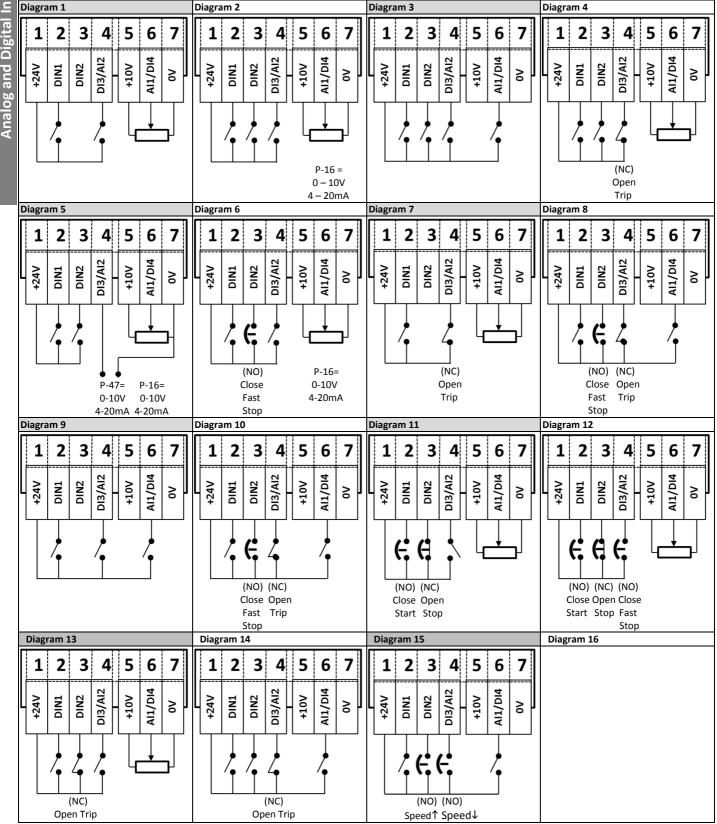

The fire mode function is enabled when P-15 = 15, 16 or 17, with Digital Input 3 assigned to activate fire mode.

Fire Mode disables the following protection features in the drive:-

O-t (Heat-sink Over-Temperature), U-t (Drive Under Temperature), Th-FLt (Faulty Thermistor on Heat-sink), E-trip (External Trip), 4-20 F(4-20mA fault), Ph-Ib (Phase Imbalance), P-Loss (Input Phase Loss Trip), SC-trp (Communications Loss Trip), I_t-trp (Accumulated overload Trip) The following faults will result in a drive trip, auto reset and restart:-

O-Volt (Over Voltage on DC Bus), U-Volt (Under Voltage on DC Bus), h O-I (Fast Over-current Trip), O-I (Instantaneous over current on drive output), Out-F (Drive output fault, Output stage trip)

7.8. Example Connection Diagrams

8. Modbus RTU Communications

8.1. Introduction

The VersiDrive i E3S can be connected to a Modbus RTU network via the RJ45 connector on the front of the drive.

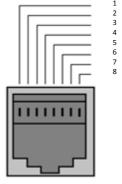

8.2. Modbus RTU Specification

| Protocol | Modbus RTU | | | | |
|--|---|--|--|--|--|
| Error check CRC | | | | | |
| Baud rate 9600bps, 19200bps, 38400bps, 57600bps, 115200bps (default) | | | | | |
| Data format | 1 start bit, 8 data bits, 1 stop bits, no parity. | | | | |
| Physical signal RS 485 (2-wire) | | | | | |
| User interface | RJ45 | | | | |

8.3. RJ45 Connector Configuration

For full MODBUS RTU register map information please refer to your PETER electronic Sales Partner. Local contacts can be found by visiting our website www.peter-electronic.com

When using MODBUS control the Analog and Digital Inputs can be configured as shown in section 7.5

CAN -CAN + 0 Volts -R5485 (PC) +R5485 (PC) +24 Volt -R5485 (Modbus RTU) +R5485 (Modbus RTU)

| Modbus | |
|----------------|--|
| RTU | |
| Communications | |

Warning: This is not an Ethernet connection. Do not connect directly to an Ethernet port.

8.4. Modbus Telegram Structure

The VersiDrive i E3S supports Master / Slave Modbus RTU communications, using the 03 Read Holding Registers and 06 Write Single Holding Register commands. Many Master devices treat the first Register address as Register 0, therefore it may be necessary to convert the Register Numbers detail in section 8.5 by subtracting 1 to obtain the correct Register address. The telegram structure is as follows:-

| Command 03 – Read Holding Registers | | | | | | | | |
|-------------------------------------|----|--------|-----|--------------------------------|----|-------|--|--|
| Master Telegram | Le | ngth | | Slave Response | Le | ngth | | |
| Slave Address | 1 | Byte |] | Slave Address | 1 | Byte | | |
| Function Code (03) | 1 | 1 Byte | | Starting Address | 1 | Byte | | |
| 1 st Register Address | 2 | Bytes | | 1 st Register Value | 2 | Bytes | | |
| No. Of Registers | 2 | Bytes |] | 2 nd Register Value | 2 | Bytes | | |
| CRC Checksum 2 Bytes | | | Etc | | | | | |
| | | |] | CRC Checksum | 2 | Bytes | | |

| Command 06 – Write Single Holding Register | | | | | | | | | |
|--|-----|-------|--|--------------------|----|-------|--|--|--|
| Master Telegram | Lei | ngth | | Slave Response | Le | ngth | | | |
| Slave Address | 1 | Byte | | Slave Address | 1 | Byte | | | |
| Function Code (06) | 1 | Byte | | Function Code (06) | 1 | Byte | | | |
| Register Address | 2 | Bytes | | Register Address | 2 | Bytes | | | |
| Value | 2 | Bytes | | Register Value | 2 | Bytes | | | |
| CRC Checksum 2 Bytes | | | | CRC Checksum | 2 | Bytes | | | |
| | | | | | | | | | |

8.5. Modbus Register Map

| Register | Par. | Turne | Supported | Fu | unction | Damas | Fundamentian |
|----------|--------|-------|-----------|---------------------|-------------------|--------|--|
| Number | | Туре | Commands | Low Byte | High Byte | Range | Explanation |
| 1 | - | R/W | 03,06 | Drive Control Cor | nmand | 03 | 16 Bit Word. |
| | | | | | | | Bit 0 : Low = Stop, High = Run Enable |
| | | | | | | | Bit 1 : Low = Decel Ramp 1 (P-04), High = Decel |
| | | | | | | | Ramp 2 (P-24) |
| | | | | | | | Bit 2 : Low = No Function, High = Fault Reset |
| | | | | | | | Bit 3 : Low – No Function, High = Coast Stop |
| | | | | | | | Request |
| 2 | - | R/W | 03,06 | Modbus Speed re | eference setpoint | 01200 | Setpoint frequency x10, e.g. 100 = 10.0Hz |
| 4 | - | R/W | 03,06 | Acceleration and | Deceleration Time | 060000 | Ramp time in seconds x 100, e.g. 250 = 2.5 seconds |
| 6 | - | R | 03 | Error code | Drive status | | Low Byte = Drive Error Code, see section 10.1 |
| | | | | | | | High Byte = Drive Status as follows :- |
| | | | | | | | 0 : Drive Stopped |
| | | | | | | | 1: Drive Running |
| | | | | | | | 2: Drive Tripped |
| 7 | | R | 03 | Output Motor Fre | equency | | Output frequency in Hz x10, e.g. 100 = 10.0Hz |
| 8 | | R | 03 | Output Motor Cu | rrent | | Output Motor Current in Amps x10, e.g. 10 = 1.0 Amps |
| 11 | - | R | 03 | Digital input statu | JS | 015 | Indicates the status of the 4 digital inputs |
| | | | | | | | Lowest Bit = 1 Input 1 |
| 20 | P00-01 | R | 03 | Analog Input 1 va | lue | 01000 | Analog input % of full scale x10, e.g. 1000 = 100% |
| 21 | P00-02 | R | 03 | Analog Input 2 va | lue | 01000 | Analog input % of full scale x10, e.g. 1000 = 100% |
| 22 | P00-03 | R | 03 | Speed Reference | Value | 01000 | Displays the setpoint frequency x10, e.g. 100 = 10.0Hz |
| 23 | P00-08 | R | 03 | DC bus voltage | | 01000 | DC Bus Voltage in Volts |
| 24 | P00-09 | R | 03 | Drive temperatur | e | 0100 | Drive heatsink temperature in ^o C |

All user configurable parameters are accessible as Holding Registers, and can be Read from or Written to using the appropriate Modbus command. The Register number for each parameter P-04 to P-60 is defined as 128 + Parameter number, e.g. for parameter P-15, the register number is 128 + 15 = 143. Internal scaling is used on some parameters, for further details, please contact your PETER electronic Sales Partner.

9. Technical Data

9.1. Environmental

| Oper | rational ambient temperature range | Open Drives | : | -10 50°C (frost and condensation free) | | |
|------------------|---|-----------------|---|--|--|--|
| | | Enclosed Drives | : | -10 40°C (frost and condensation free) | | |
| Stora | age ambient temperature range | | : | -40 60°C | | |
| Maxi | imum altitude | | : | 2000m. Derate above 1000m : 1% / 100m | | |
| Maximum humidity | | | : | 95%, non-condensing | | |
| NOTE | NOTE For UL compliance: the average ambient temperature over a 24 hour period for 200-240V, 2.2kW and 3HP, IP20 drives is | | | | | |

9.2. Rating Tables

| Frame Size | kW | HP | Input Current | Fuse / I | ИСВ (Туре В) | Maximum Cable Size | | Output Current | Recommended Brake Resistance |
|---------------|----------|-----|------------------|------------|----------------|-------------------------|--------------|-------------------|------------------------------------|
| | | | | Non UL | UL | mm | AWG | Α | Ω |
| 110 - 11 | 5 (+ / - | 10% |) V 1 Phas | e Input, 2 | 230V 3 Phase O | utput (Vol ⁻ | tage Doubler | ·) | |
| 1 | 0.37 | 0.5 | 8.5 | 16 | 15 | 8 | 8 | 2.3 | - |
| 2 | 0.75 | 1 | 12.5 | 16 | 15 | 8 | 8 | 5.8 | 100 |
| 200 - 24 | 0 (+ / - | 10% |) V 1 Phas | e Input, 3 | B Phase Output | | | | |
| 1 | 0.37 | 0.5 | 6.0 | 10 | 10 | 8 | 8 | 2.3 | - |
| 1 | 0.75 | 1 | 9.3 | 16 | 15 | 8 | 8 | 4.3 | - |
| 2 | 1.1 | 1.5 | 14.0 | 20 | 20 | 8 | 8 | 7 | 100 |

Note Cable sizes shown are the maximum possible that may be connected to the drive. Cables should be selected according to local wiring codes or regulations at the point of installation

9.3. Additional Information for UL Compliance

Versidrive i is designed to meet the UL requirements. For an up to date list of UL compliant products, please refer to UL listing NMMS.E3447733 In order to ensure full compliance, the following must be fully observed.

in section 4.6.2

Trouble Shooting 10.

10

10.1. Fault Code Messages

| Fault Code | No. | Description | Suggested Remedy |
|--------------------------|-----|-------------------------------------|--|
| no-Fit | 00 | No Fault | Not required |
| 01-ь | 01 | Brake channel over current | Check external brake resistor condition and connection wiring |
| OL-br | 02 | Brake resistor overload | The drive has tripped to prevent damage to the brake resistor |
| 0-1 | 03 | Output Over Current | Instantaneous Over current on the drive output. Excess load or shock load on the motor. |
| _ <u></u> +- <u>+</u> -P | 04 | Motor Thermal Overload (I2t) | The drive has tripped after delivering >100% of value in P-08 for a period of time to prevent damage to the motor. |
| PS-trP | 05 | Power stage trip | Check for short circuits on the motor and connection cable |
| 0-uorf | 06 | Over voltage on DC bus | Check the supply voltage is within the allowed tolerance for the drive. If the fault occurs on deceleration or stopping, increase the deceleration time in P-04 or install a suitable brake resistor and activate the dynamic braking function with P-34 |
| U-uorf | 07 | Under voltage on DC bus | The incoming supply voltage is too low. This trip occurs routinely when power is removed from the drive If it occurs during running, check the incoming power supply voltage and all components in the power feed line to the drive. |
| 0-E | 08 | Heatsink over temperature | The drive is too hot. Check the ambient temperature around the drive is within the drive specification. Ensure sufficient cooling air is free to circulate around the drive. Increase the panel ventilation if required. Ensure sufficient cooling air can enter the drive, and that the bottom entry and top exit vents are not blocked or obstructed. |
| U-E | 09 | Under temperature | Trip occurs when ambient temperature is less than -10°C. Temperature must be raised over -10°C in order to start the drive. |
| P-dEF | 10 | Factory Default parameters loaded | |
| E-Er iP | 11 | External trip | E-trip requested on digital input 3. Normally closed contact has opened for some reason. If motor thermistor is connected check if the motor is too hot. |
| 50-065 | 12 | Optibus comms loss | Check communication link between drive and external devices. Make sure each drive in the network has its unique address. |
| FLE-dc | 13 | DC bus ripple too high | Check incoming supply phases are all present and balanced |
| P-L055 | 14 | Input phase loss trip | Check incoming power supply phases are present and balanced. |
| h D-I | 15 | Output Over Current | Check for short circuits on the motor and connection cable |
| Eh-FLE | 16 | Faulty thermistor on heatsink | |
| dAFA- E | 17 | Internal memory fault. (IO) | Press the stop key. If the fault persists, consult you supplier. |
| 4-20 F | 18 | 4-20mA Signal Lost | Check the analog input connection(s). |
| dAF4-E | 19 | Internal memory fault. (DSP) | Press the stop key. If the fault persists, consult you supplier. |
| F-Ptc | 21 | Motor PTC thermistor trip | Connected motor thermistor over temperature, check wiring connections and motor |
| FAn-F | 22 | Cooling Fan Fault (IP66 only) | Check / replace the cooling fan |
| 0-hEAF | 23 | Drive internal temperature too high | Drive ambient temperature too high, check adequate cooling air is provided |
| 5C-FO I | 50 | Modbus comms loss fault | Check the incoming Modbus RTU connection cable Check that at least one register is being polled cyclically within the timeout limit set in P-36 Index 3 |
| 5C-F02 | 51 | CANopen comms loss trip | Check the incoming CAN connection cable Check that cyclic communications take place within the timeout limit set in P-36 Index 3 |
