#### **Declaration of Conformity**

PETER electronic GmbH & Co. KG hereby states that the VersiDrive i E3 product range conforms to the relevant safety provisions of the following council directives:

2004/108/EC (EMC) and 2006/95/EC (LVD) (Valid until 20.04.2016) 2014/30/EU (EMC) and 2014/35/EU (LVD) (Valid from 20.04.2016)

Designed and manufacture is in accordance with the following harmonised European standards:

EN 61800-5-1: 2003	Adjustable speed electrical power drive systems. Safety requirements. Electrical, thermal and energy.
EN 61800-3 2 <sup>nd</sup> Ed: 2004	Adjustable speed electrical power drive systems. EMC requirements and specific test methods
EN 55011: 2007	Limits and Methods of measurement of radio disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment (EMC)
EN60529 : 1992	Specifications for degrees of protection provided by enclosures

#### **Electromagnetic Compatibility**

All VersiDrive i's are designed with high standards of EMC in mind. All versions suitable for operation on Single Phase 230 volt and Three Phase 400 volt supplies and intended for use within the European Union are fitted with an internal EMC filter. This EMC filter is designed to reduce the conducted emissions back into the supply via the power cables for compliance with the above harmonised European standards. It is the responsibility of the installer to ensure that the equipment or system into which the product is incorporated complies with the EMC legislation of the country of use. Within the European Union, equipment into which this product is incorporated must comply with the EMC Directive 2004/108/EC. When using an VersiDrive i E3 with an internal or optional external filter, compliance with the following EMC Categories, as defined by EN61800-3:2004 can be achieved:

Drive Type / Rating			EMC Category							
		Cat C1	Cat C2	Cat C3						
1 Phase,	230 Volt Input	No additional filtering required								
		Use shielded motor cable								
3 Phase, 400 Volt Input		Use External Filter	External Filter No additional filtering required							
		Use shielded motor cable								
Note	Compliance wit	th EMC standards is dependent on a	number of factors including the environm	nent in which the drive is installed,						
Note	motor switchin	g frequency, motor, cable lengths ar	nd installation methods adopted.							
	For shielded motor cable lengths greater than 100m and up to 200m, an output dv / dt filter must be used (please refer to the									
	PETER electronic Stock Drives Catalogue for further details)									
	Compliance with EMC directives is achieved with the factory default parameter settings

All PETER electronic VersiDrive i E3 units carry a 1 year warranty against manufacturing defects from the date of manufacture. The manufacturer accepts no liability for any damage caused during or resulting from transport, receipt of delivery, installation or commissioning. The manufacturer also accepts no liability for damage or consequences resulting from inappropriate, negligent or incorrect installation, incorrect adjustment of the operating parameters of the drive, incorrect matching of the drive to the motor, incorrect installation, unacceptable dust, moisture, corrosive substances, excessive vibration or ambient temperatures outside of the design specification.

The local distributor may offer different terms and conditions at their discretion, and in all cases concerning warranty, the local distributor should be contacted first.

## 2. General Information and Ratings

This chapter contains information about the VersiDrive i E3 including how to identify the drive

#### 2.1. Identifying the Drive by Model Number

Each drive can be identified by its model number, as shown in the table below. The model number is on the shipping label and the drive nameplate. The model number includes the drive and any options.

Enclosure Type: No Text = IP20 IP66S = IP66 switched IP66 = IP66 un-switched

No. of output Phases: E3S = Single Phase E3 = Three Phase

No. of input Phases: No Text = Single Phase 3 = Three Phase

### 2.2. Drive Model Numbers

Model Number	kW	НР	Output Current (A)	Frame Size

## 3. Mechanical Installation

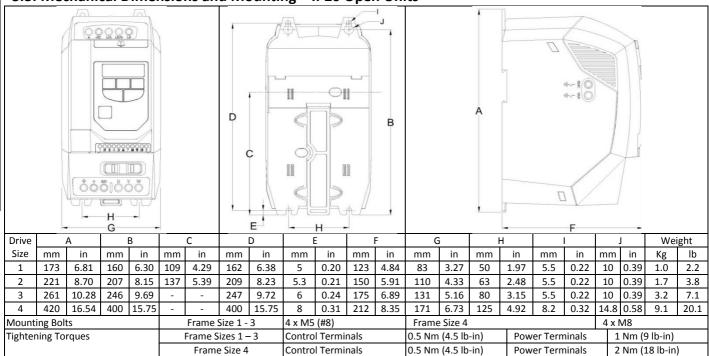

## 3.1. General

- The VersiDrive i E3 should be mounted in a vertical position only, on a flat, flame resistant, vibration free mounting using the integral mounting holes or DIN Rail clip (Frame Sizes 1 and 2 only).
- IP20 VersiDrive i E3s must be installed in a pollution degree 1 or 2 environment only.
- Do not mount flammable material close to the VersiDrive i E3
- Ensure that the minimum cooling air gaps, as detailed in section 3.5 and 3.7 are left clear
- Ensure that the ambient temperature range does not exceed the permissible limits for the VersiDrive i E3 given in section 9.1
- Provide suitable clean, moisture and contaminant free cooling air sufficient to fulfil the cooling requirements of the VersiDrive i E3

### 3.2. UL Compliant Installation

Refer to section 9.4 on page 27 for Additional Information for UL Compliance.

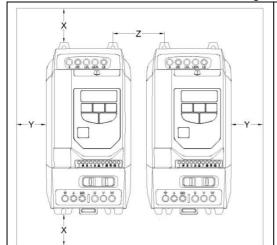

### 3.3. Mechanical Dimensions and Mounting – IP20 Open Units

### 3.4. Guidelines for Enclosure Mounting – IP20 Units

- IP20 drives are suitable for use in pollution degree 1 environments, according to IEC-664-1. For pollution degree 2 or higher environments, drives should be mounted in a suitable control cabinet with sufficient ingress protection to maintain a pollution degree 1 environment around the drive.
- Enclosures should be made from a thermally conductive material.
- Ensure the minimum air gap clearances around the drive as shown below are observed when mounting the drive.
- Where ventilated enclosures are used, there should be venting above the drive and below the drive to ensure good air circulation. Air should be drawn in below the drive and expelled above the drive.
- In any environments where the conditions require it, the enclosure must be designed to protect the VersiDrive i E3 against ingress of airborne dust, corrosive gases or liquids, conductive contaminants (such as condensation, carbon dust, and metallic particles) and sprays or splashing water from all directions.
- High moisture, salt or chemical content environments should use a suitably sealed (non-vented) enclosure.

The enclosure design and layout should ensure that the adequate ventilation paths and clearances are left to allow air to circulate through the drive heatsink. PETER electronic recommend the following minimum sizes for drives mounted in non-ventilated metallic enclosures:-

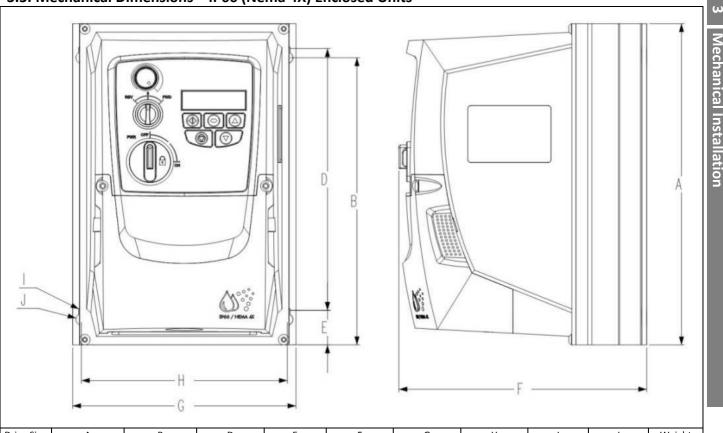

Drive Size		x ve & low		Y her de	Betv	Z ween	Recommended airflow
	mm	in	mm	in	mm	in	CFM (ft <sup>3</sup> /min)
1	50	1.97	50	1.97	33	1.30	11
2	75	2.95	50	1.97	46	1.81	22
3	100	3.94	50	1.97	52	2.05	60
4	100	3.94	50	1.97	52	2.05	120
Note :							
Dimension 7 assumes that the drives are mounted side by side with							

Dimension Z assumes that the drives are mounted side-by-side with no clearance.

Typical drive heat losses are 3% of operating load conditions.

Above are guidelines only and the operating ambient temperature of the drive MUST be maintained at all times.

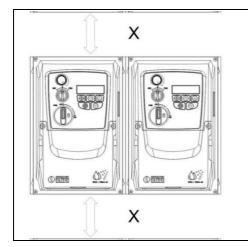

## 3.5. Mechanical Dimensions – IP66 (Nema 4X) Enclosed Units

Drive Size	A	4	E	3	C	)	I	E	F		G	i	н			I		l	We	ight
	mm	in	mm	in	mm	in	mm	in	mm	In	mm	in	mm	in	mm	in	mm	in	kg	lb
1	232.0	9.13	207.0	8.15	189.0	7.44	25.0	0.98	179.0	7.05	161.0	6.34	148.5	5.85	4.0	0.16	8.0	0.31	3.1	6.8
2	257.0	10.12	220.0	8.67	200.0	7.87	28.5	1.12	187.0	7.36	188.0	7.40	176.0	6.93	4.2	0.17	8.5	0.33	4.1	9.0
3	310.0	12.20	276.5	10.89	251.5	9.90	33.4	1.31	252	9.92	211.0	8.30	197.5	7.78	4.2	0.17	8.5	0.33	7.6	16.7

		All Frame Sizes			Pow	ver Tern	ninals	1	Nm (9 lb-	-in)										

## 3.6. Guidelines for mounting (IP66 Units)

- Before mounting the drive, ensure that the chosen location meets the environmental condition requirements for the drive shown in section 9.1
- The drive must be mounted vertically, on a suitable flat surface
- The minimum mounting clearances as shown in the table below must be observed
- The mounting site and chosen mountings should be sufficient to support the weight of the drives
- Using the drive as a template, or the dimensions shown above, mark the locations required for drilling
- Suitable cable glands to maintain the ingress protection of the drive are required. Gland holes for power and motor cables are premoulded into the drive enclosure, recommended gland sizes are shown above. Gland holes for control cables may be cut as required.

Drive Size	X Above	e & Below	Y Either Side				
	mm	in	mm	in			
1	200	7.87	10	0.39			
2	200	7.87	10	0.39			
3	200	7.87	10	0.39			
		No	to				

Typical drive heat losses are approximately 3% of operating load conditions.

Above are guidelines only and the operating ambient temperature of the drive MUST be maintained at all times.

		Cable Gland Sizes	
Drive Size	Power Cable	Motor Cable	Control Cables
1	M20 (PG13.5)	M20 (PG13.5)	M20 (PG13.5)
2	M25 (PG21)	M25 (PG21)	M20 (PG13.5)
3	M25 (PG21)	M25 (PG21)	M20 (PG13.5)

## 3.7. Gland Plate and Lock Off

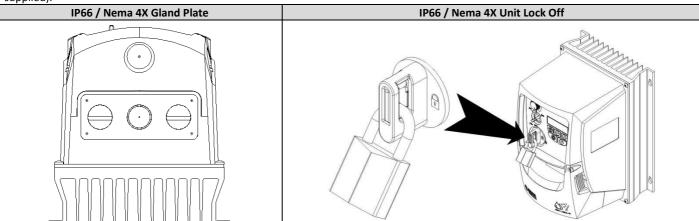

The use of a suitable gland system is required to maintain the appropriate IP / Nema rating. The gland plate has pre moulded cable entry holes for power and motor connections suitable for use with glands as shown in the following table. Where additional holes are required, these can be drilled to suitable size. Please take care when drilling to avoid leaving any particles within the product.

Cable Gland recommended Hole Sizes & types:								
	Pow	ver & Motor Cables		Control & Signal Cables				
	Moulded Hole Imperial Gland Metric Gland			Knockout Size	Imperial Glar	d Metric Gland		
	Size							
Size 1	22mm	PG13.5	M20	22mm	PG13.5	M20		
Size 2 & 3	27mm	PG21	M25	22mm	PG13.5	M20		
Size 2 & 3 Flexible Conduit Hole Sizes:								
		Drill S	ize	Trade Siz	ze	Metric		
Size 1	Size 1			¾ in		21		
Size 2 & 3 35mm 1 in 27								
• UL rated ingress protection ("Type") is only met when cables are installed using a UL recognized bushing or fitting for a flexible-								

- UL rated ingress protection ("Type") is only met when cables are installed using a UL recognized bushing or fitting for a flexible conduit system which meets the required level of protection ("Type")
- For conduit installations the conduit entry holes require standard opening to the required sizes specified per the NEC
- Not intended for installation using rigid conduit system

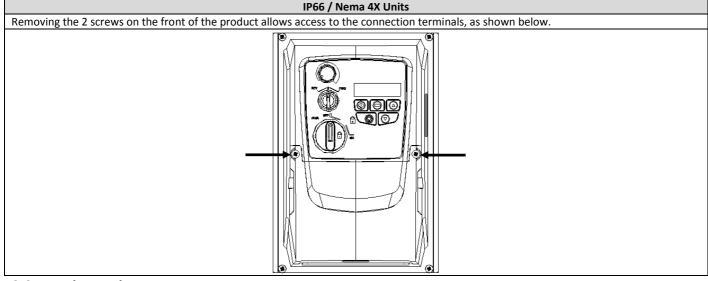

#### Power Isolator Lock Off

On the switched models the main power isolator switch can be locked in the 'Off' position using a 20mm standard shackle padlock (not supplied).

## 3.8. Removing the Terminal Cover

To access the connection terminals, the drive front cover needs to be removed as shown.

## 3.9. Routine Maintenance

The drive should be included within the scheduled maintenance program so that the installation maintains a suitable operating environment, this should include:

- Ambient temperature is at or below that set out in the "Environment" section.
- Heat sink fans freely rotating and dust free.
- The Enclosure in which the drive is installed should be free from dust and condensation; furthermore ventilation fans and air filters should be checked for correct air flow.

Checks should also be made on all electrical connections, ensuring screw terminals are correctly torqued; and that power cables have no signs of heat damage.

## 4. Power Wiring

### 4.1. Grounding the Drive

This manual is intended as a guide for proper installation. PETER electronic GmbH & Co. KG cannot assume responsibility for the compliance or the non-compliance to any code, national, local or otherwise, for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

This VersiDrive i E3 contains high voltage capacitors that take time to discharge after removal of the main supply. Before working on the drive, ensure isolation of the main supply from line inputs. Wait ten (10) minutes for the capacitors to discharge to safe voltage levels. Failure to observe this precaution could result in severe bodily injury or loss of life.

Only qualified electrical personnel familiar with the construction and operation of this equipment and the hazards involved should install, adjust, operate, or service this equipment. Read and understand this manual and other applicable manuals in their entirety before proceeding. Failure to observe this precaution could result in severe bodily injury or loss of life.

#### **Grounding Guidelines**

The ground terminal of each VersiDrive i E3 should be individually connected DIRECTLY to the site ground bus bar (through the filter if installed). VersiDrive i E3 ground connections should not loop from one drive to another, or to, or from any other equipment. Ground loop impedance must confirm to local industrial safety regulations. To meet UL regulations, UL approved ring crimp terminals should be used for all ground wiring connections.

The drive Safety Ground must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be checked periodically.

## Protective Earth Conductor

The Cross sectional area of the PE Conductor must be at least equal to that of the incoming supply conductor.

#### Safety Ground

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod, or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

#### Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

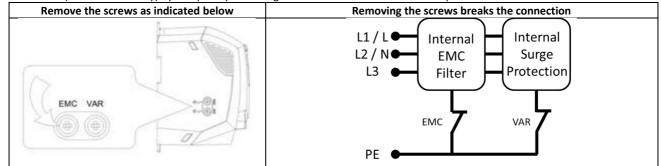

#### Ground Fault Monitoring

As with all inverters, a leakage current to earth can exist. The VersiDrive i E3 is designed to produce the minimum possible leakage current whilst complying with worldwide standards. The level of current is affected by motor cable length and type, the effective switching frequency, the earth connections used and the type of RFI filter installed. If an ELCB (Earth Leakage Circuit Breaker) is to be used, the following conditions apply: -

- A Type B Device must be used
- The device must be suitable for protecting equipment with a DC component in the leakage current
- Individual ELCBs should be used for each VersiDrive i E3

### 4.2. EMC Filter Disconnect

Drives with an EMC filter have an inherently higher leakage current to Ground (Earth). For applications where tripping occurs the EMC filter can be disconnected (on IP20 units only) by completely removing the EMC screw on the side of the product.

The VersiDrive i E3 product range has input supply voltage surge suppression components fitted to protect the drive from line voltage transients, typically originating from lightning strikes or switching of high power equipment on the same supply.

When carrying out a HiPot (Flash) test on an installation in which the drive is built, the voltage surge suppression components may cause the test to fail. To accommodate this type of system HiPot test, the voltage surge suppression components can be disconnected by removing the VAR screw. After completing the HiPot test, the screw should be replaced and the HiPot test repeated. The test should then fail, indicating that the voltage surge suppression components are once again in circuit.

#### Shield Termination (Cable Screen)

The safety ground terminal provides a grounding point for the motor cable shield. The motor cable shield connected to this terminal (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal.

#### 4.3. Wiring Precautions

Connect the VersiDrive i E3 according to sections 4.9.1 and 4.9.2, ensuring that motor terminal box connections are correct. There are two connections in general: Star and Delta. It is essential to ensure that the motor is connected in accordance with the voltage at which it will be operated. For more information, refer to section 4.6 Motor Terminal Box Connections.

It is recommended that the power cabling should be 4-core PVC-insulated screened cable, laid in accordance with local industrial regulations and codes of practice.

## 4.4. Incoming Power Connection

- For 1 phase supply, power should be connected to L1/L, L2/N.
- For 3 phase supplies, power should be connected to L1, L2, and L3. Phase sequence is not important.
- For compliance with CE and C Tick EMC requirements, a symmetrical shielded cable is recommended.
- A fixed installation is required according to IEC61800-5-1 with a suitable disconnecting device installed between the VersiDrive i E3 and the AC Power Source. The disconnecting device must conform to the local safety code / regulations (e.g. within Europe, EN60204-1, Safety of machinery).
- The cables should be dimensioned according to any local codes or regulations. Guideline dimensions are given in section 9.2.
- Suitable fuses to provide wiring protection of the input power cable should be installed in the incoming supply line, according to the data in section 9.2 Rating Tables. The fuses must comply with any local codes or regulations in place. In general, type gG (IEC 60269) or UL type J fuses are suitable; however in some cases type aR fuses may be required. The operating time of the fuses must be below 0.5 seconds.
- Where allowed by local regulations, suitably dimensioned type B MCB circuit breakers of equivalent rating may be utilised in place of fuses, providing that the clearing capacity is sufficient for the installation.
- When the power supply is removed from the drive, a minimum of 30 seconds should be allowed before re-applying the power. A minimum of 5 minutes should be allowed before removing the terminal covers or connection.
- The maximum permissible short circuit current at the VersiDrive i E3 Power terminals as defined in IEC60439-1 is 100kA.
- An optional Input Choke is recommended to be installed in the supply line for drives where any of the following conditions occur:-
  - The incoming supply impedance is low or the fault level / short circuit current is high
    - o The supply is prone to dips or brown outs
    - $\circ$   $\quad$  An imbalance exists on the supply (3 phase drives)
  - The power supply to the drive is via a busbar and brush gear system (typically overhead Cranes).
- In all other installations, an input choke is recommended to ensure protection of the drive against power supply faults. Part numbers are shown in the table.

Supply	Frame Size	AC Input Inductor
220 \/alt	1	OPT-2-L1016-20
230 Volt 1 Phase	2	OPT-2-L1025-20
1 PlidSe	3	N/A
	2	OPT-2-L3006-20
400 Volt	2	OPT-2-L3010-20
3 Phase	3	OPT-2-L3036-20
	4	OPT-2-L3050-20

## 4.5. Drive and Motor Connection

- The drive inherently produces fast switching of the output voltage (PWM) to the motor compared to the mains supply, for motors which have been wound for operation with a variable speed drive then there is no preventative measures required, however if the quality of insulation is unknown then the motor manufacturer should be consulted and preventative measures may be required.
- The motor should be connected to the VersiDrive i E3 U, V, and W terminals using a suitable 3 or 4 core cable. Where a 3 core cable is utilised, with the shield operating as an earth conductor, the shield must have a cross sectional area at least equal to the phase conductors when they are made from the same material. Where a 4 core cable is utilised, the earth conductor must be of at least equal cross sectional area and manufactured from the same material as the phase conductors.
- The motor earth must be connected to one of the VersiDrive i E3 earth terminals.
- For compliance with the European EMC directive, a suitable screened (shielded) cable should be used. Braided or twisted type screened cable where the screen covers at least 85% of the cable surface area, designed with low impedance to HF signals are recommended as a minimum. Installation within a suitable steel or copper tube is generally also acceptable.
- The cable screen should be terminated at the motor end using an EMC type gland allowing connection to the motor body through the largest possible surface area
- Where drives are mounted in a steel control panel enclosure, the cable screen may be terminated directly to the control panel using a suitable EMC clamp or gland, as close to the drive as possible.
- For IP66 drives, connect the motor cable screen to the internal ground clamp

## 4.6. Motor Terminal Box Connections

Most general purpose motors are wound for operation on dual voltage supplies. This is indicated on the nameplate of the motor. This operational voltage is normally selected when installing the motor by selecting either STAR or DELTA connection. STAR always gives the higher of the two voltage ratings.

tings.			
Incoming Supply Voltage	Motor Nameplate Voltages		Connection
230	230 / 400	Delta	
400	400 / 690		
400	230 / 400	Star	

## 4.7. Motor Thermal overload Protection

### 4.7.1. Internal Thermal Overload Protection

The drive has an in-built motor thermal overload function; this is in the form of an "I.t-trP" trip after delivering >100% of the value set in P-08 for a sustained period of time (e.g. 150% for 60 seconds).

#### 4.7.2. Motor Thermistor Connection

Where a motor thermistor is to be used, it should be connected as follows:-

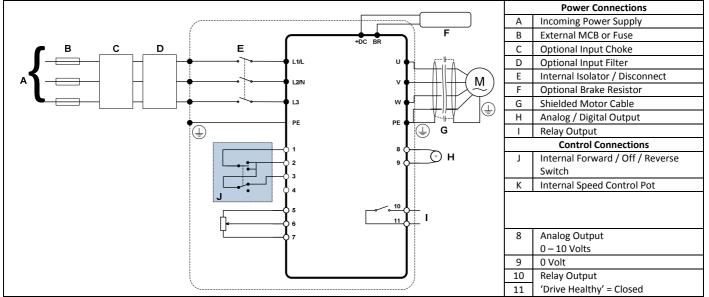

Control Terminal Strip	Additional Information
	<ul> <li>Compatible Thermistor : PTC Type, 2.5kΩ trip level</li> <li>Use a setting of P-15 that has Input 3 function as External Trip, e.g. P-15 = 3. Refer to section 7 for further details.</li> <li>Set P-47 = "Ptc-th"</li> </ul>

### 4.8. Control Terminal Wiring

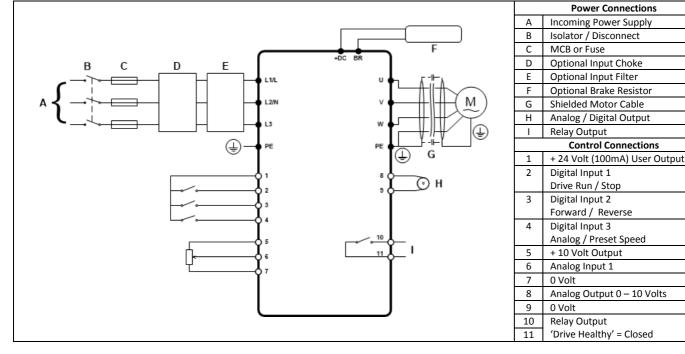

- All analog signal cables should be suitably shielded. Twisted pair cables are recommended.
- Power and Control Signal cables should be routed separately where possible, and must not be routed parallel to each other.
- Signal levels of different voltages e.g. 24 Volt DC and 110 Volt AC, should not be routed in the same cable.
- Maximum control terminal tightening torque is 0.5Nm.
- Control Cable entry conductor size: 0.05 2.5mm<sup>2</sup> / 30 12 AWG.

## 4.10. Using the REV/0/FWD Selector Switch (Switched Version Only)

By adjusting the parameter settings the VersiDrive i E3 can be configured for multiple applications and not just for Forward or Reverse. This could typically be for Hand/Off/Auto applications (also known and Local/Remote) for HVAC and pumping industries.

REV FWD	REV FWD	REV FWD
$\smile$		

	Switch Position		Parameters to Set P-12 P-15		Notes
Run Reverse	STOP	Run Forward	0	0	Factory Default Configuration Run Forward or Reverse with speed controlled from the Local POT
STOP	STOP	Run Forward	0	5,7	Run forward with speed controlled form the local POT Run Reverse - disabled
Preset Speed 1	STOP	Run Forward	0	1	Run Forward with speed controlled from the Local POT Preset Speed 1 provides a 'Jog' Speed set in P-20
Run Reverse	STOP	Run Forward	0	6, 8	Run Forward or Reverse with speed controlled from the Local POT
Run in Auto	STOP	Run in Hand	0	4	Run in Hand – Speed controlled from the Local POT Run in Auto 0 Speed controlled using Analog input 2 e.g. from PLC with 4-20mA signal.
Run in Speed Control	STOP	Run in PI Control	5	1	In Speed Control the speed is controlled from the Local POT In PI Control, Local POT controls PI set point
Run in Preset Speed Control	STOP	Run in PI Control	5	0, 2, 4,5, 812	In Preset Speed Control, P-20 sets the Preset Speed In PI Control, POT can control the PI set point (P-44=1)
Run in Hand	STOP	Run in Auto	3	6	Hand – speed controlled from the Local POT Auto – Speed Reference from Modbus
Run in Hand	STOP	Run in Auto	3	3	Hand – Speed reference from Preset Speed 1 (P-20) Auto – Speed Reference from Modbus

NOTE To be able to adjust parameter P-15, extended menu access must be set in P-14 (default value is 101)

## 4.11. Control Terminal Connections

9 P-46	PI Feedback Source Select	0	5	0	-				
_	Selects the source of the feedback signal to be used by the PI controller.								
r.	<b>0 : Analog Input 2</b> (Terminal 4) Signal level readable in P00-02.								
ite	1 : Analog Input 1 (Terminal 6) Signal level readable in P00-01								
Ĕ	2: Motor Current. Scaled as % of P-08.								
Parameters	3 : DC Bus Voltage Scaled 0 – 1000 Volts = 0 – 100%								
Pa	4: Analog 1 – Analog 2. The value of Analog Input 2 is subtracted from Analog			l. The value is	limited to 0.				
	<b>5 : Largest (Analog 1, Analog 2)</b> . The largest of the two analog input values is a	always used fo	r PI feedback.						
P-47	Analog Input 2 Signal Format	-	-	-	U0-10				
	U D- ID = 0 to 10 Volt Signal								
	<b>A D-2D</b> = 0 to 20mA Signal								
	<b>L 4-20</b> = 4 to 20mA Signal, the VersiDrive i E3 will trip and show the fault cod	de <b>4-<i>20F</i> if the</b>	e signal level fa	alls below 3mA					
	r 4-20 = 4 to 20mA Signal, the VersiDrive i E3 will run at Preset Speed 1 (P-20	) if the signal	level falls belo	w 3mA					
	E 20-4 = 20 to 4mA Signal, the VersiDrive i E3 will trip and show the fault cod	e <b>4-20F</b> if the	signal level fa	lls below 3mA					
	r 20-4 = 20 to 4mA Signal, the VersiDrive i E3 will run at Preset Speed 1 (P-20	) if the signal	level falls belo	ow 3mA					
	PLc-Lh = Use for motor thermistor measurement, valid with any setting of P-2	15 that has Inp	out 3 as E-Trip.	Trip level : 3k	Ω, reset 1kΩ				
P-48	Standby Mode Timer	0.0	25.0	0.0	S				
	When standby mode is enabled by setting P-48 > 0.0, the drive will enter standby following a period of operating at minimum speed								
	(P-02) for the time set in P-48. When in Standby Mode, the drive display show	s <b>5Елdb</b> ¥, and	the output to	the motor is d	isabled.				
P-49	PI Control Wake Up Error Level	0.0	100.0	5.0	%				
	When the drive is operating in PI Control Mode (P-12 = 5 or 6), and Standby Mode is enabled (P-48 > 0.0), P-49 can be used to define								
	the PI Error Level (E.g. difference between the setpoint and feedback) required			-					
	Mode. This allows the drive to ignore small feedback errors and remain in Star			k drops suffici	· ·				
P-50	User Output Relay Hysteresis	0.0	100.0	0.0	%				
	Sets the hysteresis level for P-19 to prevent the output relay chattering when close to the threshold.								
6.3	Advanced Parameters								
Par.	Description	Minimum	Maximum	Default	Units				
P-51	Motor Control Mode	0	4	0	-				
	0: Vector speed control mode								
	1: V/f mode								
	2: PM motor vector speed control								
	3: BLDC motor vector speed control								
	4: Synchronous Reluctance motor vector speed control								

 P-52
 Motor Parameter Autotune
 0
 1
 0

 0: Disabled
 1: Enabled. When enabled, the drive immediately measures required data from the motor for optimal operation. Ensure all motor related parameters are correctly set first before enabling this parameter. This parameter can be used to optimise the performance when P-51 = 0. Autotune is not required if P-51 = 1. For settings 2 – 4 of P-51, autotune <u>MUST</u> be carried out <u>AFTER</u> all other required motor settings are entered.
 Vector Mode Gain
 0.0
 200.0
 50.0
 %

P-53	Vector Mode Gain	0.0	200.0	50.0	%					
	Single Parameter for Vector speed loop tuning. Affects P & I terms simultaneo	usly. Not active	e when P-51 =	1.						
P-54	Maximum Current Limit	0.1	175.0	150.0	%					
	Defines the max current limit in vector control modes									
P-55	Motor Stator Resistance	0.00	655.35	-	Ω					
	Motor stator resistance in Ohms. Determined by Autotune, adjustment is not	normally requi	ired.							
P-56	Motor Stator d-axis Inductance (Lsd)	0	6553.5	-	mH					
	Determined by Autotune, adjustment is not normally required.									
P-57	Motor Stator q-axis Inductance (Lsq)	0	6553.5	-	mH					
	Determined by Autotune, adjustment is not normally required.									
P-58	DC Injection Speed	0.0	P-01	0.0	Hz / RPM					
	Sets the speed at which DC injection current is applied during braking to Stop, allowing DC to be injected before the drive reaches zero speed if desired.									
P-59	DC Injection Current	0.0	100.0	20.0	%					
	Sets the level of DC injection braking current applied according to the conditio	ns set in P-32	and P-58.							
P-60	Thermal Overload Retention	0	1	0	-					
	<ul> <li>0 : Disabled</li> <li>1 : Enabled. When enabled, the drive calculated motor overload protection intremoved from the drive.</li> </ul>	formation is re	tained after th	ne mains powe	er is					

## 6.4. P-00 Read Only Status Parameters

6.4. P	-00 Read Only Status Parameters							
Par.	Description	Explanation						
P00-01	1 <sup>st</sup> Analog input value (%)	100% = max input voltage						
P00-02	2 <sup>nd</sup> Analog input value (%)	100% = max input voltage						
P00-03	Speed reference input (Hz / RPM)	Displayed in Hz if P-10 = 0, otherwise RPM						
P00-04	Digital input status	Drive digital input status						
P00-05	User PI output (%)	Displays value of the User PI output						
P00-06	DC bus ripple (V)	Measured DC bus ripple						
P00-07	Applied motor voltage (V)	Value of RMS voltage applied to motor						
P-00-08	DC bus voltage (V)	Internal DC bus voltage						
P00-09	Heatsink temperature (°C)	Temperature of heatsink in °C						
P00-10	Run time since date of manuf. (Hours)	Not affected by resetting factory default parameters						
P00-11	Run time since last trip (1) (Hours)	Run-time clock stopped by drive disable (or trip), reset on next enable only if a trip occurred. Reset also on next enable after a drive power down.						
P00-12	Run time since last trip (2) (Hours)	Run-time clock stopped by drive disable (or trip), reset on next enable only if a trip occurred (under-volts not considered a trip) – not reset by power down / power up cycling unless a trip occurred prior to power down						
P00-13	Trip Log	Displays most recent 4 trips with time stamp						
P00-14	Run time since last disable (Hours)	Run-time clock stopped on drive disable, value reset on next enable						
P00-15	DC bus voltage log (V)	8 most recent values prior to trip, 256ms sample time						
P00-16	Heatsink temperature log (°C)	8 most recent values prior to trip, 30s sample time						
P00-17	Motor current log (A)	8 most recent values prior to trip, 256ms sample time						
P00-18	DC bus ripple log (V)	8 most recent values prior to trip, 22ms sample time						
P00-19	Internal drive temperature log (°C)	8 most recent values prior to trip, 30 s sample time						
P00-20	Internal drive temperature (°C)	Actual internal ambient temperature in °C						
P00-21	CANopen process data input	Incoming process data (RX PDO1) for CANopen: PI1, PI2, PI3, PI4						
P00-22	CANopen process data output	outgoing process data (TX PDO1) for CANopen: PO1, PO2, PO3, PO4						
P00-23	Accumulated time with heatsink > 85°C (Hours)	Total accumulated hours and minutes of operation above heatsink temp of 85°C						
P00-24	• •	Total accumulated hours and minutes of operation with drive internal ambient above 80C						
P00-25	Estimated rotor speed (Hz)	In vector control modes, estimated rotor speed in Hz						
P00-26	kWh meter / MWh meter	Total number of kWh / MWh consumed by the drive.						
P00-27	Total run time of drive fans (Hours)	Time displayed in hh:mm:ss. First value displays time in hrs, press up to display mm:ss.						
P00-28	Software version and checksum	Version number and checksum. "1" on LH side indicates I/O processor, "2" indicates power stage						
P00-29	Drive type identifier	Drive rating, drive type and software version codes						
P00-30	Drive serial number	Unique drive serial number						
P00-31	Motor current ld / lq	Displays the magnetising current (Id) and torque current (Iq). Press UP to show Iq						
P00-32	Actual PWM switching frequency (kHz)	Actual switching frequency used by drive						
P00-33	Critical fault counter – O-I	These parameters log the number of times specific faults or errors occur, and are						
P00-34	Critical fault counter – O-Volts	useful for diagnostic purposes.						
P00-35	Critical fault counter – U-Volts							
P00-36	Critical fault counter – O-temp (h/sink)							
P00-37								
	Critical fault counter – b O-I (chopper)							
P00-38	Critical fault counter – O-hEAt (control)							
P00-39	Modbus comms error counter							
P00-40	CANbus comms error counter							
P00-41	I/O processor comms errors							
P00-42	Power stage uC comms errors	Table Plasters of deterministic access to the						
P00-43	Drive power up time (life time) (Hours)	Total lifetime of drive with power applied						
P00-44	Phase U current offset & ref	Internal value						
P00-45	Phase V current offset & ref	Internal value						
P00-46	Phase W current offset & ref	Internal value						
P00-47	Index 1 : Fire mode total active time	Total activation time of Fire Mode Displays the number of times Fire Mode has been activated						
P00-48	Index 2 : Fire Mode Activation Count							
P00-48 P00-49	Scope channel 1 & 2 Scope channel 3 & 4	Displays signals for first scope channels 1 & 2 Displays signals for first scope channels 3 & 4						
	•							
P00-50	Bootloader and motor control	Internal value						

6 Parameters

# 7. Analog and Digital Input Macro Configurations

## 7.1. Overview

VersiDrive i E3 uses a Macro approach to simplify the configuration of the Analog and Digital Inputs. There are two key parameters which determine the input functions and drive behaviour:-

- P-12 Selects the main drive control source and determines how the output frequency of the drive is primarily controlled.
- P-15 Assigns the Macro function to the analog and digital inputs.

#### Additional parameters can then be used to further adapt the settings, e.g.

- P-16 Used to select the format of the analog signal to be connected to analog input 1, e.g. 0 10 Volt, 4 20mA
- P-30 Determines whether the drive should automatically start following a power on if the Enable Input is present
- P-31 When Keypad Mode is selected, determines at what output frequency / speed the drive should start following the enable command, and also whether the keypad start key must be pressed or if the Enable input alone should start the drive.
   P-47 Used to select the format of the analog signal to be connected to analog input 2, e.g. 0 10 Volt, 4 20mA

The diagrams below provide an overview of the functions of each terminal macro function, and a simplified connection diagram for each.

#### 7.2. Macro Functions Guide Key STOP / RUN Latched input, Close to Run, Open to Stop Forward Rotation /Reverse Rotation Selects the direction of motor operation AI1 REF Analog Input 1 is the selected speed reference P-xx REF Speed setpoint from the selected preset speed PR-REF Preset speeds P-20 – P-23 are used for the speed reference, selected according to other digital input status ^-FAST STOP (P-24)-^ When both inputs are active simultaneously, the drive stops using Fast Stop Ramp Time P-24 E-TRIP External Trip input, which must be Normally Closed. When the input opens, the drive trips showing E-Lr P or PLc-Lh depending on P-47 setting Normally Open Contact, Momentarily Close to Start (NO) (NC) Normally Closed Contact, momentary Open to Stop Fire Mode Activates Fire Mode, see section 7.7 Fire Mode ENABLE Hardware Enable Input. In Keypad Mode, P-31 determines whether the drive immediately starts, or the keypad start key must be pressed. In other modes, this input must be present before the start signal via the fieldbus interface INC SPD Normally Open, Close the input to Increase the motor speed DEC SPD Normally Open, Close input to Decrease motor speed **KPD REF Keypad Speed Reference selected** FB REF Selected speed reference from Fieldbus (Modbus RTU / CAN Open / Master depending on P-12 setting)

## 7.7. Fire Mode

rations

bu

Con

Input Macro

The Fire Mode function is designed to ensure continuous operation of the drive in emergency conditions until the drive is no longer capable of sustaining operation. The Fire Mode input may be a normally open (Close to Activate Fire Mode) or Normally Closed (Open to Activate Fire Mode) according to the setting of P-30 Index 2. In addition, the input may be momentary or maintained type, selected by P-30 Index 3.

This input may be linked to a fire control system to allow maintained operation in emergency conditions, e.g. to clear smoke or maintain air quality within that building.

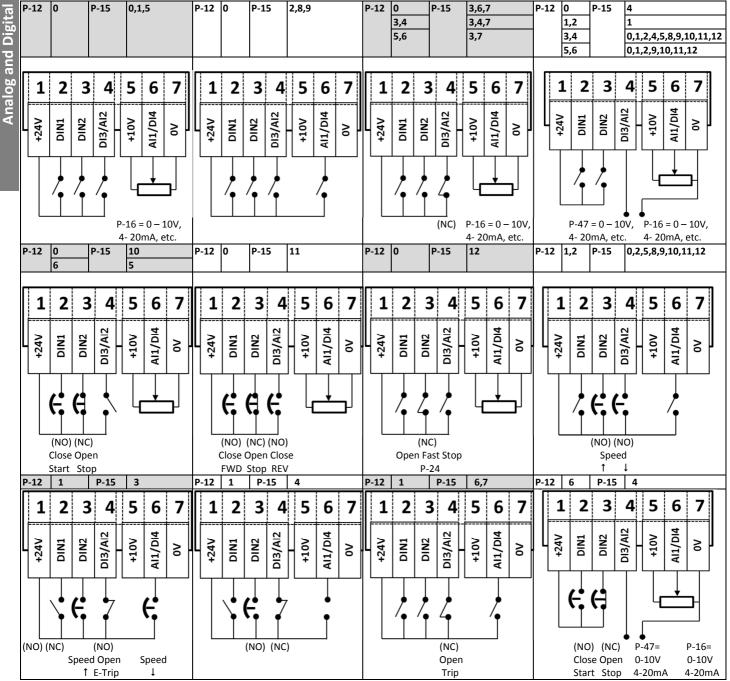

The fire mode function is enabled when P-15 = 15, 16 or 17, with Digital Input 3 assigned to activate fire mode.

Fire Mode disables the following protection features in the drive:-

O-t (Heat-sink Over-Temperature), U-t (Drive Under Temperature), Th-FLt (Faulty Thermistor on Heat-sink), E-trip (External Trip), 4-20 F(4-20mA fault), Ph-Ib (Phase Imbalance), P-Loss (Input Phase Loss Trip), SC-trp (Communications Loss Trip), I\_t-trp (Accumulated overload Trip) The following faults will result in a drive trip, auto reset and restart:-

O-Volt (Over Voltage on DC Bus), U-Volt (Under Voltage on DC Bus), h O-I (Fast Over-current Trip), O-I (Instantaneous over current on drive output), Out-F (Drive output fault, Output stage trip)

### 7.8. Example Connection Diagrams

## 8. Modbus RTU Communications

### 8.1. Introduction

The VersiDrive i E3 can be connected to a Modbus RTU network via the RJ45 connector on the front of the drive.

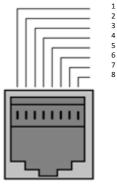

### 8.2. Modbus RTU Specification

Protocol	Modbus RTU						
Error check	Error check CRC						
Baud rate 9600bps, 19200bps, 38400bps, 57600bps, 115200bps (default)							
Data format	1 start bit, 8 data bits, 1 stop bits, no parity.						
Physical signal	RS 485 (2-wire)						
User interface	RJ45						

## 8.3. RJ45 Connector Configuration

For full MODBUS RTU register map information please refer to your PETER electronic Sales Partner.

When using MODBUS control the Analog and Digital Inputs can be configured as shown in section 7.5

CAN -CAN + 0 Volts -RS485 (PC) +RS485 (PC) +24 Volt -RS485 (Modbus RTU) +RS485 (Modbus RTU)

Warning: This is not an Ethernet connection. Do not connect directly to an Ethernet port.

## 8.4. Modbus Telegram Structure

The VersiDrive i E3 supports Master / Slave Modbus RTU communications, using the 03 Read Holding Registers and 06 Write Single Holding Register commands. Many Master devices treat the first Register address as Register 0, therefore it may be necessary to convert the Register Numbers detail in section 8.5 by subtracting 1 to obtain the correct Register address. The telegram structure is as follows:-

Command 03 – Read Holding Registers										
Master Telegram	Le	Length		Length		Slave Response	Length			
Slave Address	1	Byte	]	Slave Address	1	Byte				
Function Code (03)	1	1 Byte		Starting Address	1	Byte				
1 <sup>st</sup> Register Address	2	Bytes	1	1 <sup>st</sup> Register Value	2	Bytes				
No. Of Registers	2	Bytes	]	2 <sup>nd</sup> Register Value	2	Bytes				
CRC Checksum	CRC Checksum 2 Bytes			Etc						
			]	CRC Checksum	2	Bytes				

Command 06 – Write Single Holding Register										
Master Telegram	Lei	Length		Slave Response	Length					
Slave Address	1	Byte		Slave Address	1	Byte				
Function Code (06)	1	1 Byte		Function Code (06)	1	Byte				
Register Address	2	Bytes		Register Address	2	Bytes				
Value	2	Bytes		Register Value	2	Bytes				
CRC Checksum		Bytes		CRC Checksum	2	Bytes				

#### 8.5. Modbus Register Map

Register	Par.	Truce	Supported	F	unction	Damas	Fundamentian
Number		Туре	Commands	Low Byte	High Byte	Range	Explanation
1	-	R/W	03,06	Drive Control Co	ommand	03	16 Bit Word.
							Bit 0 : Low = Stop, High = Run Enable
							Bit 1 : Low = Decel Ramp 1 (P-04), High = Decel
							Ramp 2 (P-24)
							Bit 2 : Low = No Function, High = Fault Reset
							Bit 3 : Low – No Function, High = Coast Stop
							Request
2	-	R/W	03,06	Modbus Speed r	eference setpoint	05000	Setpoint frequency x10, e.g. 100 = 10.0Hz
4	-	R/W	03,06	Acceleration and	d Deceleration Time	060000	Ramp time in seconds x 100, e.g. 250 = 2.5 seconds
6	-	R	03	Error code	Drive status		Low Byte = Drive Error Code, see section 10.1
							High Byte = Drive Status as follows :-
							0 : Drive Stopped
							1: Drive Running
							2: Drive Tripped
7		R	03	Output Motor Fi	requency	020000	Output frequency in Hz x10, e.g. 100 = 10.0Hz
8		R	03	Output Motor C	urrent	0480	Output Motor Current in Amps x10, e.g. 10 = 1.0 Amps
11	-	R	03	Digital input stat	tus	015	Indicates the status of the 4 digital inputs
							Lowest Bit = 1 Input 1
20	P00-01	R	03	Analog Input 1 v	ralue	01000	Analog input % of full scale x10, e.g. 1000 = 100%
21	P00-02	R	03	Analog Input 2 v	alue	01000	Analog input % of full scale x10, e.g. 1000 = 100%
22	P00-03	R	03	Speed Reference	e Value	01000	Displays the setpoint frequency x10, e.g. 100 = 10.0Hz
23	P00-08	R	03	DC bus voltage		01000	DC Bus Voltage in Volts
24	P00-09	R	03	Drive temperatu	ire	0100	Drive heatsink temperature in <sup>o</sup> C

All user configurable parameters are accessible as Holding Registers, and can be Read from or Written to using the appropriate Modbus command. The Register number for each parameter P-04 to P-60 is defined as 128 + Parameter number, e.g. for parameter P-15, the register number is 128 + 15 = 143. Internal scaling is used on some parameters, for further details, please contact your PETER electronic Sales Partner.

## 9. Technical Data

## 9.1. Environmental

Operational ambient temperature range Open Drives Enclosed Drives

Storage ambient temperature range

-10 ... 50°C (frost and condensation free)
-10 ... 40°C (frost and condensation free)
-40 ... 60°C
2000m. Derate above 1000m : 1% / 100m
95%, non-condensing

Maximum altitude Maximum humidity

For UL compliance: the average ambient temperature over a 24 hour period for 200-240V, 2.2kW and 3HP, IP20 drives is 45°C.

4	22	30	51.9	63	70	16	5	46	22		

Note Cable sizes shown are the maximum possible that may be connected to the drive. Cables should be selected according to local wiring codes or regulations at the point of installation

## 9.3. Single Phase Operation of Three Phase Drives

All drive models intended for operation from three phase mains power supply (e.g. model codes VD i .../3E3) may be operated from a single phase supply at up to 50% of maximum rated output current capacity.

In this case, the AC power supply should be connected to L1 (L) and L2 (N) power connection terminals only.

### 9.4. Additional Information for UL Compliance

VersiDrive i E3 is designed to meet the UL requirements. For an up to date list of UL compliant products, please refer to UL listing NMMS.E3447733

In order to ensure full compliance, the following must be fully observed.

	D					
Input Power Supply						
Supply Voltage	200 – 240 RMS Volts for 230 Volt rated units, + /- 10% variation allowed. 240 Volt RMS Maximum					
	380 – 480 Volts for 400 Volt rated units, + / - 10% variation allowed, Maximum 500 Volts RMS					
Imbalance	Maximum 3% voltage variation between phase – phase voltages allowed					
	All VersiDrive i E3 units have phase imbalance monitoring. A phase imbalance of > 3% will result in the drive tripping.					
	For input supplies which have supply imbalance greater than 3% (typically the Indian sub- continent & parts of Asia					
	Pacific including China) PETER electronic recommends the installation of input line reactors.					
Frequency	50 – 60Hz + / - 5% Variatio	n				
Short Circuit Capacity	Voltage Rating	Min kW (HP)	Max kW (HP)	Maximum supply short-circuit current		
	115V	0.37 (0.5)	1.1 (1.5)	100kA rms (AC)		
	230V	0.37 (0.5)	11 (15)	100kA rms (AC)		
	400 / 460V	0.75 (1)	22 (30)	100kA rms (AC)		
	All the drives in the above table are suitable for use on a circuit capable of delivering not more than the above					
	specified maximum short-circuit Amperes symmetrical with the specified maximum supply voltage when protected					
	by Class J fuses.					
<b>Mechanical Installat</b>	ion Requirements					
All VersiDrive i E3 units	are intended for indoor inst	allation within contro	olled environments whi	ch meet the condition limits shown in section		
9.1						
The drive can be opera	ted within an ambient temp	erature range as state	ed in section 9.1			
For IP20 units, installat	ion is required in a pollution	degree 1 environmer	nt			
For IP66 (Nema 4X) uni	its, installation in a pollution	degree 2 environmer	nt is permissible			
Frame size 4 drives mu	st be mounted in an enclosu	re in a manner that e	nsures the drive is prot	ected from 12.7mm (1/2 inch) of deformation		
of the enclosure if the	enclosure impacted.					
<b>Electrical Installation</b>	n Requirements					
Incoming power supply	connection must be accord	ing to sections 4.3 and	d 4.4			
Suitable Power and motor cables should be selected according to the data shown in section 9.2 and the National Electrical Code or other						
applicable local codes.						
Motor Cable	75°C Copper must be used					
Power cable connectio	ns and tightening torques ar	e shown in sections 3	.3 and 3.5			
Integral Solid Sate shor	t circuit protection does not	provide branch circui	it protection. Branch ci	rcuit protection must be provided in		
accordance with the na	ational electrical code and ar	y additional local cod	les. Ratings are shown	in section 9.2		
• • • •		•	-	ted 480Volt (phase to ground), 480 Volt		
(phase to phase), suita	ble for over voltage category	iii and shall provide p	protection for a rated in	mpulse withstand voltage peak of 4kV.		
UL Listed ring terminal	s / lugs must be used for all b	ous bar and grounding	g connections			
<b>General Requiremen</b>	nts					
VersiDrive i E3 provide	s motor overload protection	in accordance with th	ne National Electrical C	ode (US).		
• Where a motor thermistor is not fitted, or not utilised, Thermal Overload Memory Retention must be enabled by setting P-50 = 1						
<ul> <li>Where a mot</li> </ul>	tor thermistor is not fitted, o	r not utilised, Therma	I Overload Memory Re	tention must be enabled by setting P-50 = 1		
				tention must be enabled by setting P-50 = 1 arried out according to the information shown		

#### **Trouble Shooting** 10.

10

### 10.1. Fault Code Messages

Fault Code	Fault No. Descriptio		Suggested Remedy		
no-Fit	00	No Fault	Not required		
01-ь	01	Brake channel over current	Check external brake resistor condition and connection wiring		
ОС-рг	02	Brake resistor overload	The drive has tripped to prevent damage to the brake resistor		
0-1	03	Output Over Current	Instantaneous Over current on the drive output. Excess load or shock load on the motor.		
I_E-ErP	04	Motor Thermal Overload (I2t)	The drive has tripped after delivering >100% of value in P-08 for a period of time to prevent damage t the motor.		
PS-trP	05	Power stage trip	Check for short circuits on the motor and connection cable		
0-uort	06	Over voltage on DC bus	Check the supply voltage is within the allowed tolerance for the drive. If the fault occurs on deceleration or stopping, increase the deceleration time in P-04 or install a suitable brake resistor and activate the dynamic braking function with P-34		
U-uort	07		The incoming supply voltage is too low. This trip occurs routinely when power is removed from the dri If it occurs during running, check the incoming power supply voltage and all components in the power feed line to the drive.		
0-E	08		The drive is too hot. Check the ambient temperature around the drive is within the drive specification. Ensure sufficient cooling air is free to circulate around the drive. Increase the panel ventilation if required. Ensure sufficient cooling air can enter the drive, and that the bottom entry and top exit vents are not blocked or obstructed.		
U-E	09	Under temperature	Trip occurs when ambient temperature is less than -10°C. Temperature must be raised over -10°C in order to start the drive.		
P-dEF	10	Factory Default parameters loaded			
E-Er iP	11	External trip	E-trip requested on digital input 3. Normally closed contact has opened for some reason. If motor thermistor is connected check if the motor is too hot.		
5C-065	12	Optibus comms loss	Check communication link between drive and external devices. Make sure each drive in the network its unique address.		
FLE-dc	13	DC bus ripple too high	Check incoming supply phases are all present and balanced		
P-L055	14	Input phase loss trip	Check incoming power supply phases are present and balanced.		
н D-I	15	Output Over Current	Check for short circuits on the motor and connection cable		
th-FLt	16	Faulty thermistor on heatsink			
dafa-e	17	Internal memory fault. (IO)	Press the stop key. If the fault persists, consult you supplier.		
4-20 F					
dAFA-E	ER-E 19 Internal memory fault. (DSP) Press the stop key. If the fault persists, consult you supplier.		Press the stop key. If the fault persists, consult you supplier.		
F-Ptc	F-PLc 21 Motor PTC thermistor trip Connected motor thermistor over temperature, check wiring connections and motor		Connected motor thermistor over temperature, check wiring connections and motor		
FAn-F	22	Cooling Fan Fault (IP66 only)	an Fault (IP66 only) Check / replace the cooling fan		
0-hEAF	23	Drive internal temperature too high	gh Drive ambient temperature too high, check adequate cooling air is provided		
AFE-D I	40	Autotune Fault	The motor parameters measured through the autotune are not correct.		
AFE-05	41		Check the motor cable and connections for continuity		
AFE-03	42		Check all three phases of the motor are present and balanced		
AFE-DA	43				
ALF-OS	44				
5C-FO I	50	Modbus comms loss fault	Check the incoming Modbus RTU connection cable Check that at least one register is being polled cyclically within the timeout limit set in P-36 Index 3		
5C-F02	51 CANopen comms loss trip Check the incoming CAN connection cable Check that cyclic communications take place within the timeout limit set in P-36 Index 3
